SUMMARY

Python Developer with 14 months of combined experience, including 3 months of internship and 11 months of full-time professional experience, in developing backend and full-stack applications. Proficient in Core Python, FastAPI, PostgreSQL, Object-Oriented Programming (OOP), RESTful APIs, MVC architecture, and database management. Hands-on experience in developing AI-powered financial news analysis platforms, integrating AI agents, and building API-driven applications. Skilled in web scraping and browser automation using Selenium, Playwright, and BeautifulSoup to extract, process, and manage data efficiently. Experienced in AI integration, application performance optimization, and developing secure, maintainable, and scalable software solutions. Passionate about writing clean, efficient code and leveraging modern technologies to solve real-world business challenges.

TECHNICAL SKILLS

Programming Languages:	Python, C, C++, Java
Backend Technologies:	FastAPI, REST APIs, JWT Authentication, SQLAlchemy
Databases:	PostgreSQL, MySQL, Supabase
Web Scraping & Automation:	Selenium, Playwright, BeautifulSoup
AI & LLM:	AI Agents, LLM Integration, Prompt Engineering
Frontend Technologies:	HTML, CSS, Bootstrap, JavaScript
Tools:	Git, GitHub, Postman, VS Code
Concepts:	Object-Oriented Programming (OOP), MVC Architecture, RESTful API Design, CRUD Operations

EXPERIENCE

ProLance IT LLP December 2025 - Present
Python Backend / AI Engineer *Surat, Gujarat*

- Developed scalable backend APIs using FastAPI and PostgreSQL for AI-powered applications.
- Built web scraping and browser automation solutions using Selenium, Playwright, and BeautifulSoup.
- Integrated AI agents and LLMs for automated news analysis and data processing.
- Designed and optimized RESTful APIs with JWT authentication and SQLAlchemy ORM.
- Collaborated with the development team using Git and GitHub to deliver production-ready features.

PROJECTS

Diamond Sales Chatbot — AI-Powered Diamond ERP Assistant August 2026 - Present
Tech Stack: Python, FastAPI, Google Gemini, Pydantic, SQLAlchemy, Plotly

- Developed an AI-powered conversational assistant using Python, FastAPI, and Google Gemini to translate natural-language questions into structured SQL queries across a diamond ERP database containing 66 relational tables.
- Optimized LLM context through selective schema retrieval and keyword-based table routing, reducing prompt token consumption by 85–90% (from approximately 15,000 to fewer than 1,500 tokens per request).
- Built automated SQL error detection and self-correction workflows with up to three retry attempts to help resolve query-generation and execution errors.
- Implemented read-only SQL validation and security guardrails to restrict destructive database operations and reduce the risk of unsafe query execution.
- Implemented structured query planning with Pydantic and deterministic SQL generation to improve query consistency and support complex joins, filtering, sorting, and aggregation

AI-Powered Trading News Analysis Platform March 2026 - August 2026
Tech Stack: Python, FastAPI, Postgres, AI Agent, LLM (Trading Analysis)

- Developed an AI-powered trading news analysis platform to collect and process financial news from multiple RSS feed sources.
- Built AI agents to analyze 500+ financial news articles daily from RSS feeds.
- Designed a deep analysis engine to evaluate the impact of news on stocks, sectors, and overall market sentiment.
- Implemented prediction models to identify which stocks and sectors are likely to be affected by specific news events.
- Analyzed historical market reactions to determine which types of news create strong market movements and which predictions fail over time.
- Generated detailed trading insights, sector-wise impact analysis, and future market trend predictions based on news patterns and sentiment.
- Developed scalable backend APIs using FastAPI and PostgreSQL for efficient news storage, analysis, and retrieval.

ATS – Auto Trading System (Multi-Agent AI Trading Platform) December 2025 - March 2026
Tech Stack: Python, FastAPI, PostgreSQL, SQLAlchemy, Gemini LLM, AI Agents, APScheduler, WebSockets

- Developed an autonomous AI trading system with a 4-agent pipeline (Discovery, Confirmation, Execution, Risk Monitor) that converts high-impact financial news into paper trades in 9.2 seconds on average.
- Built a Confirmation Agent that validates news signals against RSI, Bollinger Bands and VWAP using TA-Lib and yfinance, filtering out trades that technical price action contradicts.
- Implemented fixed-fractional position sizing, a paper trading engine with slippage simulation, and risk controls including a daily loss limit, a position cap and an emergency stop.
- Created a Risk Monitor Agent that re-evaluates open positions every 2 minutes and triggers exits when new news contradicts the original trade thesis.
- Designed a PostgreSQL schema with JSONB reasoning chains and Pydantic validation of LLM outputs, giving a full audit trail for every trade.

ImageExpert – Image Processing Web Application June 2025 – December 2025
Tech Stack: MongoDB, Express.js, React.js, Node.js, Python (Image Processing)

- Developed a full-stack image processing web application using MERN stack and Python.
- Designed and integrated Python-based modules for image resizing, optimization, and overlays.
- Achieved up to 40% reduction in image file size while preserving visual quality.
- Structured the application following MVC architecture to improve maintainability.
- Ensured full responsiveness across mobile and desktop devices.

EDUCATION

Master of Computer Applications, MIT World Peace University, Pune, Maharastra August 2024 - June 2026
CGPA: 8.04 / 10.00
Bachelor of Computer Applications, Uka Tarsadia University, Bardoli, Gujarat July 2021 - June 2024
CGPA: 6.91 / 10.00

CERTIFICATIONS

- **IBM** - Artificial Intelligence Fundamentals (2024)
- **IBM** - Generative AI in Action (2024)
- **Microsoft** – Full Stack Development (2025)
